Integrated Skills in English III

Time allowed: 2 hours 30 minutes

This examination paper has three tasks. You must complete all tasks.

Task 1 – Reading into writing task

Read the information below. Then, **in your own words**, write a report (approximately 300 words) for an international development committee:

- i) summarising the information given in the text about the way in which 'technology has quietly revolutionised the way we live' **and**
- ii) evaluating the positive and negative effects of these recent technological changes, with relevant examples.

Wireless World

A decade ago, there were plenty of sceptics who argued that new technology would never make the office redundant, render giant shopping malls obsolete or change the way we socialise. Ten years on, some of those radical suggestions still sound fanciful.

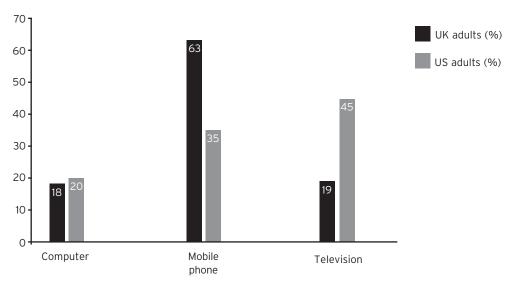

However, in other respects, technology has quietly revolutionised the way we live. Broadband penetration is high and rising, and more homes and businesses are using Wi-Fi, a more convenient way of accessing the internet. A new wave of gadgets, from mobile phones that provide quicker online connections, MP3 players, personal organisers and lightweight, inexpensive laptops are making a connected world the reality.

There is little doubt that an increasing number of us expect the internet, in particular, to transform the world around us. Two recent polls reveal that it is already having a profound effect on the way we behave and how we relate to one another, changing the way we live, work and play.

Researchers asked adults and teenagers in the UK and US to describe how they use the internet, what mobile phones they own and whether they are comfortable with all the changes that new technologies are releasing. The results showed that British people own more gadgets than Americans, and parents worry about how much time their children spend in front of a PC screen and the type of information they are consuming. It also suggested that old habits – such as watching TV – may die out as new ones, including talking to friends online, become firmly established.

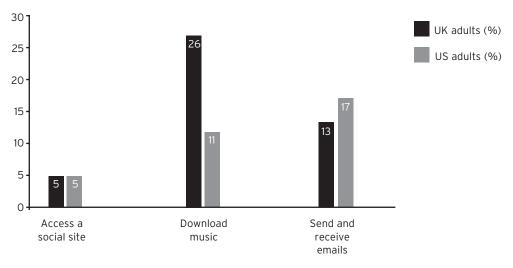

In both the UK and the US, virtually all of those surveyed own a TV, but well over 90% of adults in both countries also have a mobile phone, over 50% have a laptop and around 90% have access to a desktop computer.

Many of the adults surveyed said they couldn't resist surfing the internet or checking their emails while on holiday, and children said they preferred socialising online to meeting friends face-to-face.

If you could only have one, which would you choose?

Which of the below do you do from your mobile?

Turn over page

Turn over pag	ge

You are becoming increasingly upset about the poor content of programmes shown on a particular TV channel. Write a formal letter (approximately 250 words) to the channel, outlining why you are dissatisfied with the programmes, suggesting what they could be replaced with and what the effects might be on the viewers and the channel if these changes are not made.

ISE III

Write a story (approximately 250 words) for a writing competition beginning with the words, 'How wrong I was to have been so influenced by my first impression.'
