Task 3

Shopping in the dark

Paragraph A

Everyone knows that online shopping is becoming more and more popular. But not many people realise that night-time shopping is increasing dramatically.

Paragraph B

A recent report showed that more and more of us are logging on when we should be asleep. An amazing 15 per cent of all online purchases now take place between midnight and 6am. And more than half take place between 6pm and midnight.

Paragraph C

Some night-time purchases are unsurprising. For example, toys sell well in the middle of the night. This is probably because tired parents want something to entertain their young children! Pillows and duvets are also popular.

Paragraph D

Another reason for night shopping is that computers are becoming smaller. Smart phones, for example, are easy to use in bed. So are iPads and other tablet computers.

Paragraph E

If you use a computer at night, you should be careful. Dr Seena Parveen, a specialist in healthy sleeping patterns, said: 'Night shoppers might not get enough rest. There is a lot of evidence to show that the more time you spend online after dark, the less likely you are to get a good night's sleep.'

Questions 19-21
